Subject: Microsoft Settlement

The so-called settlement is just Microsoft's way of foisting overvalued obsolete and sub-par hardware & software off on a public that would not normally buy such material it lets them increase their market share dump unsellable product at minimal cost and get a massive tax write-off for the overvalued garbage without ever admitting to or abstaining from their usual anti-competitive monopolistic practices. It does not matter to me if they are broken up or remain whole -- they need to be brought to heel made to behave and financially punished for their unethical practices!
